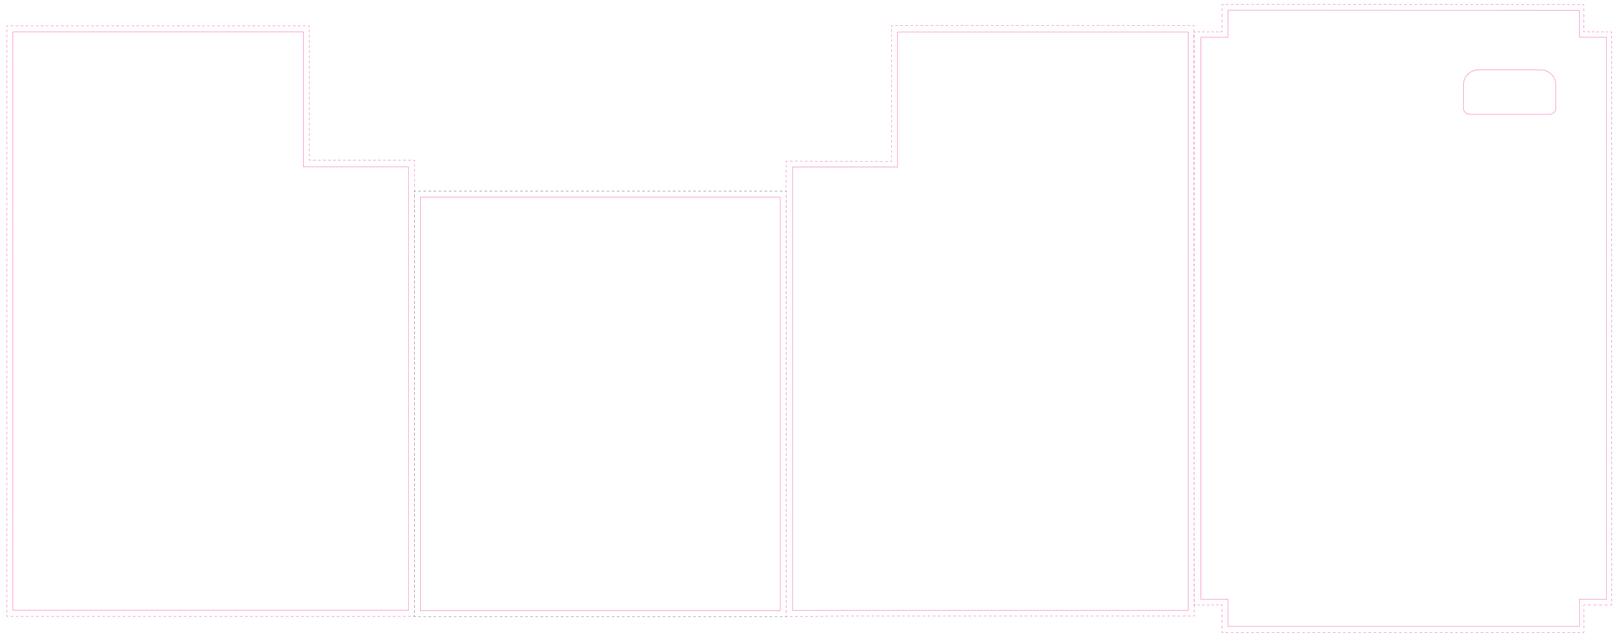
Printing area: 696,5 x 1048 mm
Visible area: 676,5 x 1028 mm



LEFT **FRONT** **RIGHT** **DOOR**

MICRO MATIC

USER GUIDE:

*N.B. Do **not** move the template panels - the dimensions and position of the panels are life-sized and placed as they would be on the product.*

Please note that the bleed area outside the magenta stroke are in the template for functional reasons and will not be visible in the print output.

1. ADD ARTWORK TO THE PANELS
Double-click the outer (dashed line) of the panel you want to edit.

1.1 Add background color:
Set a background color or gradient from the color/swatch menu

1.2 Add file/image:
If you need to insert an image please select “draw inside ” on the left panel. You are now able to place your image inside of the panel by using the place feature (File -> Place).
The files you place must be embedded in the file (click the Links tab, select the relevant file and click “Embed Image(s)”)

1.3 Add text
Add text box onto the panel. Please remember to outline the text (select the text box and click “Create Outlines” from the Type menu)

1.4 Add vector graphic
Place/draw your vector graphic and place it onto the panel. Please note that only graphics placed inside the magenta line will be visible

2. GROUP OBJECTS
Once your artwork on the panel is completed, select both the inner and outer line + any vector and text objects included in the panel. Click the “object” tap then “group”.

3. EDIT NEXT PANEL:
To continue your artwork, double-click on the dashed line of the next panel and repeat the abovementioned steps.
If you want to align your artwork across more panels, please note, that the space between the full line and the dashed line is used for cutting - it will therefore **not** be shown on the product.

4. EXPORT ARTWORK PRINT FILES:
Once all your artwork is completed and grouped individually, select the individual groups and click “file”, “export selection” and save as “high-quality print PDF” (300 dpi).

Repeat the exporting process for all the panels. All the panels should be saved as an individual PDF and named accordingly.
